

**SHURE MFG**

---

June 2001

To Whom It May Concern:

Shure Mfg has been providing abrasive saws and x-ray diffraction equipment for the quartz crystal industry for twenty years. During these many years, we have worked with many customers from different parts of the world that have used a variety of suspension agents and oils with various degrees of satisfaction. To achieve optimum performance, our slurry saws require a suspension oil that suspends effectively, reduces cutting time and has a long shelf life.

It has been our experience over these past years that Crystalcut 300 offers these benefits and provides our customers with a most effective suspension fluid for use in their abrasive saws.

We recommend Crystalcut 300 without hesitation for use in our equipment and we endorse Lighthouse Lubricant Solutions as a reputable manufacturer of suspension fluids and related products.

Sincerely,

Radleigh J. Speer  
President
